**Agency:** CDPHE

**Purpose of Contact:** Remediation of B701 area oil stained soils

## Discussion

During removal of the B701 foundation, subsurface piping containing oil was discovered. Remediation of the oil stained soils and associated piping began on October 1 and was completed today. Confirmation samples were collected from the excavation floor, side walls and end walls. These were all screened using the onsite total petroleum hydrocarbon (TPH) screening methodology and all sample results were below 2,000 ppm. The action level for TPH is 5,000 ppm.

Because the field screening results are below action levels, the samples were submitted for offsite analyses. It was agreed that the excavation will be backfilled based on the field screen data.
